

## **Sun protection for your backseat passengers:**

### **LLumar UV and heat-protection films**

*Summertime is travel time: whether it's a trip to the seaside, to the local lake or a long weekend in the mountains - if you have the chance, you jump into your car and leave the daily grind behind you. Your bags are packed and the journey can begin – with one constant travel companion: the sun, with its merciless UV rays and ever-present heat. Children in the backseat are often exposed to the sun for several hours at a time – and yet it is so easy to protect them against ultraviolet rays and heat, by coating your panes with LLumar special films.*

Modern vans are especially popular family cars. However, they have very large windows, causing them to heat up extremely quickly. It is therefore important to cover such cars with a high-quality car window film. The sun blinds with suction cups and cute bear designs frequently on offer in supermarkets do more harm than good. They provide shade but allow the UV rays to penetrate unhindered. The would-be shade fools the eyes, which causes the pupils to dilate, thus making them particularly sensitive to UV rays. Only professional car glass film, available in a range of different tints and variants, can offer real protection against UV rays.

LLumar Sun-Blocker automotive window films have a sun protection factor of 80 and thus provide the passengers with optimum protection against dangerous UV rays. They block out up to 99 percent of UV radiation.

A further positive effect of the film is its splinter protection. A recent Dekra test found that, in a lateral collision, the window

panes in the car were prevented from smashing, protecting the passengers from being hit by dangerous glass splinters.

Incidentally, LLumar automotive window film is not only available in black. The spectrum ranges from slightly tinted films and coloured films through to specially vapour-plated films which keep out up to 70 percent of the total solar energy.

LLumar ultraviolet and heat-protection films are available from all good car accessory retailers and from professional automotive window dealerships which offer professional film application. You can find your nearest car glazier at [www.autoglaser.de](http://www.autoglaser.de).
