### **Auto Security Film Provides Protection from Carjacking**

**ST. LOUIS (February 19, 2007)** – (OTCBB: SOLUQ), The United Nations and the U.S. Department of State have recently issued warnings about travel in Kenya due to increasing incidents of violent crime, including armed car hijackings—or “carjackings.”

Recently, armed thugs laid siege in and around Kikuyu, near the capital city of Nairobi, carjacking residents and robbing them as they drove from their homes. Violent carjackings in the Nairobi area have lately also involved family members of a U.S. embassy employee, a regional director for the aid agency CARE, and the chief U.S. military attaché.

A travel advisory from the U.S. embassy in Nairobi has cautioned Americans to evaluate their personal safety situation and added that such attacks are becoming more frequent.

As the threat of carjackings grows in Nairobi and other major cities across the world, more and more car owners are turning to laminate security window film for added security. Once only the purview of the most expensive automotive lines of Audi, BMW, and Mercedes vehicles, this multilayered, optically clear polyester film can be professionally installed as a retrofit application in a matter of hours, providing additional protection to the occupants from “smash-and-grab” theft and attempted carjackings.

CPMilms Inc., the world’s largest manufacturer of automotive safety and security window films, says domestic and international business is up significantly in the past five years, in part because of drivers’ increased awareness of security film products.

“Even a 10-second delay in entry is often sufficient to discourage a carjacker—the increased noise calls attention to what they are trying to do,” says Pam Feese, marketing manager, CPMilms International Division.

#### **What else can you do?**

Stay alert at all times and be aware of your environment. The most likely places for a carjacking are:

- High crime areas
- Lesser traveled, rural roads
- Intersections where you must stop
- Isolated areas in parking lots
- Residential driveways and gates
- Traffic jams or congested areas
