

Stay cool with LLumar Esprit™ ATC – the new generation of innovative automotive window films

Just in time for summer, LLumar presents the latest generation of automotive window films: LLumar Esprit™ ATC. The advantages are obvious: highly appealing design, optimum UV and heat protection, longevity and colour stability, with outstanding value for money.

The LLumar Esprit™ ATC automotive window film not only enhances the vehicle's appearance, but also provides noticeable heat reduction through rejection of up to 44% of the incoming total solar energy. This can significantly lower the interior temperature and ease the load on the air conditioning system, which can contribute to long-term fuel savings. A 99% UV protection level protects both the rear-seat passengers and the interior fittings from UV rays and reduces material fatigue.

Although visibility is very good from the inside, the film makes it difficult to look in from the outside, thereby protecting the passengers' privacy and any valuables inside the vehicle. However, the LLumar Esprit™ ATC automotive window film does not interfere with radio waves from mobile telephones, the car radio or navigation devices.

The high-quality polyester film is extremely scratch-resistant and, thanks to a new colour technology, provides excellent colour stability for long-lasting colour fastness. LLumar offers a seven-year manufacturer's warranty. CPFilms, manufacturer of LLumar films, is certified by the British

Standards Institute (BSI). LLumar automotive window films are sold and installed by professional installers within the LLumar dealer network. For more information, please visit our website at www.llumar.eu.
